PROFESSIONAL SUMMARY

Automotive Systems Design Engineer and Design Support Group Leader with 13+ years of experience in wire harness and electrical systems design, supporting Toyota and Mazda vehicle programs from concept through production launch. Experienced in product development, design release support, engineering change management, production readiness, and cross-functional collaboration throughout the product development lifecycle.

Skilled in electrical systems design, engineering analysis, root cause analysis, DFMEA support, design validation, technical documentation, and engineering change implementation. Proven ability to interpret engineering drawings, review design changes, resolve complex technical issues, and collaborate with manufacturing, quality, suppliers, and cross-functional engineering teams to deliver robust, manufacturable, and production-ready designs.

Recently based in Windsor, Ontario and seeking opportunities as a Design Release Engineer, Electrical Systems Engineer, Wire Harness Engineer, or Product Development Engineer, bringing extensive OEM experience and a strong commitment to delivering high-quality engineering solutions.

- Eligible to work in Canada
- Available immediately
- Open to contract and full-time opportunities
- Willing to relocate within Canada for the right opportunity
- Valid U.S. B1/B2 visa – able to travel for work assignments

HIGHLIGHT OF QUALIFICATIONS

- Automotive Systems Engineer with 13+ years of experience supporting vehicle electrical systems, wiring harness design, circuit development, system integration, and OEM vehicle programs for Toyota and Mazda.
- Strong knowledge of vehicle electrical systems, electrical schematics, wiring harnesses, circuit troubleshooting, vehicle electrical integration, and CAN communication.
- Strong knowledge of automotive electrical architecture, Electrical Service Manuals (ESM), circuit validation, root cause analysis, and troubleshooting of vehicle electrical systems.
- Supported engineering change management, document control, BOM updates, technical specifications, and product release activities throughout the product lifecycle.
- Supported vehicle builds, validation activities, production launches, and troubleshooting efforts in manufacturing environments.
- Demonstrated ability to quickly learn new technologies, processes, and engineering systems while working in cross-functional teams.
- Recently completed a Diploma in Web Development and Internet Applications, strengthening programming, software troubleshooting, debugging, and technical

problem-solving skills. Comfortable learning vehicle programming tools, electrical control systems, and new technologies.

- Proficient in automotive engineering tools including Capital Logic, Capital XC, Capital Integrator, CR5000, CATIA V5, and advanced Microsoft Excel.
- Proven leadership experience coordinating engineering teams, mentoring colleagues, managing technical deliverables, and collaborating with global cross-functional teams.
- Strong analytical, problem-solving, communication, and project coordination skills with the ability to quickly learn new technologies and adapt to changing business requirements.

EDUCATION

Web Development and Internet Applications, Diploma

01/2025-04/2026

Fanshawe College London, Ontario

Bachelor of Science in Electronics Communications Engineering

05/2001-05/2007

Central Philippine University Philippines

TECHNICAL SKILLS

Electrical Systems & Product Development

Wire Harness Design, Harness Routing, Electrical Schematics, Wiring Diagrams, Electrical Architecture, Power Distribution, System Integration, Requirements Analysis, Bill of Materials (BOM) Management, Product Lifecycle Support, Design for Manufacturing (DFM), Design Validation (DVP&R), DFMEA, CAN Communication

Engineering Change & Manufacturing Support

Engineering Change Management (ECN/ECR), Production Readiness, Manufacturing Support, Production Issue Resolution, Root Cause Analysis, Corrective Actions, Risk Assessment, Validation & Testing, Technical Documentation, Process Documentation, Traceability, Supplier Coordination

Automotive Quality

APQP, DFMEA, PFMEA, DVP&R, ISO 9001

Engineering Software

Capital Logic, Capital XC, Capital Integrator, CR5000, CATIA V5

Process Improvement

Lean Manufacturing, Continuous Improvement, Kaizen, 5S

Leadership & Collaboration

Cross-Functional Collaboration, Technical Problem Solving, Team Leadership, Mentoring & Training, Stakeholder Coordination, Knowledge Sharing

Business Tools

Microsoft Excel (Pivot Tables, Formulas, Data Analysis, Macros), Microsoft Word, Microsoft PowerPoint

Software Development

JavaScript, React, HTML5, CSS3, Firebase, Git, GitHub

ENGINEERING EXPERIENCE

Design Support Group Leader

05/2010-05/2023

Furukawa Automotive Systems Design PHILS., INC Laguna, Philippines

Automotive Components Design Company (ISO 9001:2008 Certified Company)

- Evaluated engineering drawings, technical manuals, and investigation reports against established quality standards, identifying errors, inconsistencies, and compliance issues before release.
- Identified errors, inconsistencies, missing information, and noncompliance issues before documents were released.
- Provided clear written comments, correction instructions, and revision recommendations to designers and engineering team members.
- Reviewed revised work to confirm that identified issues were properly resolved and quality requirements were met.
- Mentored team members on drawing quality, documentation standards, error prevention, and continuous improvement.
- Helped improve the accuracy and reliability of engineering outputs through detailed review, feedback, and final validation.
- Applied engineering standards and professional judgment to determine whether technical outputs met quality requirements, documenting decisions with clear supporting rationale.

System Design Engineer

09/2018-02/2023

OEM Assignment: Toyota Motor Company, Michigan USA

- Supported integration and validation of instrument panel electrical systems for vehicle development and production programs.
- Participated in vehicle build support, issue investigation, and production readiness activities to resolve electrical and assembly concerns.
- Supported design feasibility reviews, engineering releases, and technical documentation throughout the product development lifecycle.
- Coordinated with cross-functional stakeholders including manufacturing, quality, suppliers, and OEM engineering teams to support project planning and product development activities.
- Reviewed engineering drawings, technical requirements, and packaging constraints to support vehicle integration and production readiness.
- Supported CAN signal integration and verification across vehicle modules and electrical subsystems.
- Investigated wiring harness routing, packaging, and installation issues impacting manufacturability and vehicle performance.
- Performed engineering analysis using CR5000 and advanced Excel tools to support issue tracking, design verification, and technical reporting.

Circuit Design Engineer

10/2013-05/2015

OEM Assignment: Mazda Company, Hiroshima, Japan

- Supported electrical architecture development, circuit design, and power distribution systems for vehicle programs.

- Developed and validated circuit designs in accordance with OEM electrical requirements and engineering standards.
- Assisted in troubleshooting electrical system concerns and supporting reliability improvement initiatives.
- Collaborated with global engineering teams to maintain design documentation, validation records, and technical deliverables.

TRAINING AND TECHNICAL DEVELOPMENT

Circuitry Design Training using CR5000 (Toyota, Nagoya, Japan)	11/2017-05/2018
Circuitry Design Training using Capital Logic (Mazda, Hiroshima, Japan)	03/2013-04/2013
Suzuki W/H Product Design Condition Check Suzuki Design Change Check (Furukawa, Laguna, Philippines)	02/2013
Quality Control Circle (Furukawa, Laguna, Philippines)	09/15/2012
Understanding Quality Management System and ISO 9001:2008 (Furukawa, Laguna, Philippines)	03/11/2011
Making of 3D Data for W/H Parts (Connector) with Catia V5	08/2010-11/2010

VOLUNTEER ACTIVITIES

Fanshawe Online Ambassadors <i>Fanshawe College London, Ontario</i>	09/2025-01/2026
• Assisted students with online platforms and digital tools • Provided clear, user-focused support for technical issues	
Facility Support Volunteer <i>Crouch Neighbourhood Resource Centre London, Ontario</i>	01/2025-05/2025
• Delivered professional, user-focused assistance in a fast-paced environment
